

# Examples.vdw

This example tests the use of a fully generated OPC UA connector within the IIP-Ecosphere platform.

The IIP-Ecosphere platform generates and uses a fully generated **OPC UA Connector** is used to connect to the **VDW/UMATI OPC UA server** and read data that is written to an output File "opcTest.txt". An alternative, manually written, OPC UA connector is given for comparison.

**Sender service** and **File output** are generic and not part of the application and hence showed as greyed out.
