

Examples.MODBUS

This example tests the use of a generated MODBUS/TCP connector within the oktoflow platform.

The platform generates and uses an instantiated **MODBUS/TCP Connector** to connect a MODBUS/TCP test server and to read data. Monitored execution characteristics are written to the file "opcTest.txt". An alternative, manually written, OPC UA connector is given for comparison.

Sender service and **File output** are generic and not part of the application and hence showed as greyed out.

The MODBUS data model used for testing:
