

Examples.vdw

This example tests the use of a fully generated OPC UA connector within the oktoflow platform.

The platform generates and uses an instantiated **OPC UA Connector** connect to the **VDW/UMATI OPC UA server** and read data. Monitored execution characteristics are written to the file "opcTest.txt". An alternative, manually written, OPC UA connector is given for comparison.

Sender service and **File output** are generic, used in the tests and not part of the generated application and hence showed as greyed out.
